

Lambeth College Server Deployment

Technique tendered to supply existing client Lambeth College with no less than fifteen rack mounted servers. The tender bid was accepted on the basis of proven technical ability and cost effectiveness.

Jim Dann, IT Services Manager said “Lambeth College is a major inner London college of further education; we have approximately 24,000 students and a network of 1,600 personal computers. We have enjoyed a good working relationship with Technique for a number of years who have supplied us with various IT solutions.

We were highly impressed by their response to our recent tender, which was to supply and install fifteen rack mounted Compaq servers on three sites. These servers are to become the backbone of our new state-of-the-art curriculum network. Our schedule was tight and demanding. Technique started delivery the following day and the whole installation was completed within the week. The installation was neat, efficient and completed to a high professional standard. We will certainly invite Technique to tender for similar projects.”
