

QPR Football Club and the Princes Trust

The Princes Trust has teamed up with the famous football club to provide a leading edge learning centre at QPR's modern premises at Loftus Road - and Technique has just finished installing the IT facilities.

Technique proved it was on the ball by kitting out the club with a large suite of laptop computers - with bespoke software to suit West London College, which commissioned the project.

The laptops are now up and running, and are being used by a cross section of people from the local community, anxious to add to their qualifications by taking further education training.

Account manager at Technique, Tim Burnett, said: "We tailored the software to suit the client, then configured the laptops with a wireless network, a fast ASDL link and Internet connectivity. The wireless facility enables users to work from any room within the building."

A West London College spokesman said: "We found Technique through the Hewlett Packard website. I contacted them and dealt with Tim Burnett. He was able to design the solution and provide me with detailed information on specifications which would suit our project. Technique configured the machines and visited the site to install them.

"We will now be working in partnership with the football club and the Princes Trust to encourage people from surrounding areas to use this resource for their continual development.

"I'm extremely pleased with the personal and professional service offered by Technique, and we will be looking to them to service our next project".

Caption: the laptops were configured from Technique's head office at Aldermaston, before being commissioned at QPR Football Club, where training was given to users.
